

HIGH PRESSURE WATER JETTING ACCESSORIES SURFACE PREPARATION

Model Hammelmann / PA / WOMA

350 - 500 bar

A) Jet gun with mechanical dry shut off valve.

Pressing the trigger opens the valve and causes high pressure water to flow. The valve is closed and flow is cut off simply by releasing the trigger.

up to 3000 bar

(B) Mechanical bypass (dump) gun.

By releasing the trigger, the gun bypass valve is opened, emitting the water through a hose without pressure.

(C) Jet gun with electrical control signal.

A proximity switch sends an electric signal through a cable to the pump bypass control. When releasing the trigger, the water flow is cut off.

Various options available: lances, point jet or flat jet nozzles, in either fixed position or rotating.

Please discuss your specific project requirements with one of our experts.

✓ SIR Approved.

✓ Where jet guns have a wireless control (A and B), the machine automatically reverts immediately to an unpressurised mode, when releasing the trigger.

Complete your water jetting setup with our rental line up of **high pressure pumps from 350-3000 bar** and **vacuum equipment up to 8000 m³/hr.**

For safe operation, please consider our comprehensive range of specialised **TST safety PPE and accessories.**
